Parte B. RESUMEN DEL CV

Quality indexes (WOS): Total number of published articles: 192; Total number of published articles in Q1: 78; Citations: 3717; H-index: 34; Total number of PhD Thesis supervised: 19. Number of six-year evaluations: 6 (5 research + 1 transference); Competitive Projects: 36; projects with companies/institutions: 59.

My scientific research has been developed in three areas: a) Environmental radioactivity; b) Characterization and Valorization of NORM Wastes; c) Atmospheric pollution (including noise).

The first main contributions have been made in gamma spectrometry with Ge detectors by developing a general procedure for efficiency calibration including self-sorption corrections by matrix composition and bulk density, obtaining a general function in cylindrical counting geometry. Secondly, I have developed novelty studies in NORM industries, specially they devoted to the production of both fertilizers and TiO₂ pigment, having contributed to new Spanish regulations in NORM for the National Safety Council (CSN).

I consider that is especially relevant my collaborations con the chemical industry, being around sixty R&D projects and contracts, developing projects devoted to radiological evaluation of NORM activities (fertilizers, TiO₂ industry, Rn in building materials, etc.). These projects have obtained the chemical behavior of many natural radionuclides in extreme conditions. To point out relevant have been the studies developed on the scales formed along the industrial chemical processes, material very enriched in natural radionuclides (up to 6 orders of magnitude higher than environmental materials), which have to be managed as radioactive waste and stored in special landfills.

Finally, I have always considered that one of the main functions of university teaching and research staff is the supervision of doctoral theses (teaching and research must be joined), as well as master's and degree final projects. For this reason, throughout my 33-year university career I have supervised 19 doctoral theses and around 60-70 master's/degree final projects.
